SACRAMENTO— California's population dipped by 182,083 residents last year, bringing the state's total to 39,466,855 people as of January 1, 2021, according to new population estimates and housing data released today by the California Department of Finance.

California's negative growth rate of -0.46 percent represents the first 12-month decline since state population estimates have been recorded. Three principal factors contributed in this year-over-year population decrease:

- Continuing declines in natural increase – births minus non-COVID-19 deaths (loss of 24,000)
- Continuing declines in foreign immigration – accelerated in recent years by federal policy (loss of 100,000)
- Deaths in 2020 separately associated with the COVID-19 pandemic (loss of 51,000)

In recent years, the slowdown in natural increase – a nationwide trend affecting California more than other states – has contributed to the state's population growth slowing and plateauing. The addition of 2020's COVID-19-related deaths, combined with immigration restrictions in the past year, tipped population change to an annual loss.

The COVID-19 pandemic increased California deaths in 2020 by 51,000 – 19 percent above the average death rate for the three preceding years. "Excess deaths" – rates above the past three-year average – were observed in 51 of the state's 58 counties. Of these counties, 19 reported death rates up to 10 percent above average, 20 reported deaths between 10 and 20 percent above average, and 12 reported deaths 20 percent or more above average.

Net international migration to California was negative in 2020, reflecting the suspension of visa issuance that began in March and continued through December, which was also extended to certain types of foreign worker visas in June. Global restrictions during the pandemic also resulted in 53,000 fewer international students in California.

As pandemic-related deaths decline and with changes in federal policy, California is expected to return to a slightly positive annual growth when calendar year 2021 population estimates are released in May 2022.

The report contains preliminary year-over-year January 2021 and revised January 2020 population data for California cities, counties, and the state. These estimates are based on information through January 1, 2021.

- Growth remains strong in the interior counties of the Sacramento Valley, the Central Valley and the Inland Empire, while coastal and northern counties saw population losses.
- Los Angeles County, the state's most populous county, has now lost population the last three years, dropping 0.3 percent in 2018 and 2019 and 0.9 percent in 2020.

- Four counties had growth rates over 1.0 percent. These counties include: San Benito (1.7 percent), Placer (1.5 percent), San Joaquin (1.3 percent), and Yuba (1.1 percent). San Benito County was the notable Bay Area exception gaining over 1.0 percent due to increased housing construction.
- Changes in population rankings for cities reinforce the movement towards inland counties; Elk Grove is now the 26th largest city passing Oceanside. Roseville is now the 39th largest city passing Pasadena and Torrance.
- For population growth from housing production, the top five cities include: Paradise (31.2 percent) in Butte County, Calimesa (7.5 percent) in Riverside County, Lathrop (6.3 percent) in San Joaquin County, Guadalupe (5.0 percent) in Santa Barbara County, and Winters (5.0 percent) in Yolo County.
- California's statewide housing growth, as measured by net unit growth in completed housing units for 2020, was 99,917. In terms of new housing growth, California constructed 103,073 new units in 2020; the first time the state built over 100,000 units since 2008. Total housing in California reached 14,429,960 units, a 0.7 percent increase.

Also of note in the report:

- 171 cities gained population and 305 lost population, while 6 had no change.
- Of the ten largest cities in California, Bakersfield had the largest percentage gain in population (0.8 percent, or 3,100) with Oakland (0.7 percent, or 3,200) in second.
- Ranked by net housing gains, Los Angeles (17,851), San Francisco (4,048), San Diego (3,897), Oakland (2,750) and Santa Clara (2,066) added the most housing units in 2020.
- Of the 14,429,960 housing units in California, 9,273,055 are single family and 4,595,273 are multi-family with 561,632 mobile homes. Multi-family housing growth outpaced single family housing by almost 9,586 net units ("net" refers to new construction minus demolition), continuing a nine-year trend.
- Larger densely populated urban areas are building most of the multi-family housing throughout the state. Los Angeles led the state gaining 15,560 multi-family units, comprising 87 percent of their net housing growth, followed by San Francisco (4,138 for 100 percent), San Diego (3,848 for 99.0 percent), and Oakland (2,754 for 100 percent).
- Conversely, single-family housing is more likely to be built further inland in typically more suburban cities. Examples of cities with a high ratio of single family to multi-family growth include: Bakersfield (94.9 percent single family), Fresno (88.2 percent single family), Sacramento (69.3 percent single family), and Roseville (83.4 percent single family).
- Group quarters account for about 2 percent of the total state population (691,000). This population includes, among others, those living in college dorms (134,000) and in correctional facilities (164,000). In 2020, the group quarters population decreased by almost 162,000 people or 19 percent due to lockdowns associated with COVID-19. The college dormitory population dropped by 110,000 (45.4 percent). The military group quarters population decreased by 1,700 (1.4 percent), local jails decreased by 17,000 (22.6 percent), state prisons decreased by 28,000 (23.1 percent), and federal prisons decreased by 4,600 (26.5 percent).
- State prisons are generally located in remote areas; as a result, increases or decreases in this population can account for significant changes in their respective locations. For example, state prison declines led to population decreases in Taft, Wasco and Delano in Kern County and Susanville in Lassen County. A closure of the Federal Prison in Taft led to the city losing the highest percentage population loss in the state (18.0 percent).

- Significant adjustments to the prison and college dorm population were made by transferring them into the household population.
 - A majority of college dorm losses were shifted back into the household population. A proportion of students were kept in the county hosting the school while the remainder was returned to their county of origin. A small portion of students were removed from the state to represent out of state and international students.
 - The prison population was shifted back into the household population by returning them to their intake counties using data from the California Department of Corrections.

Background Information:

These population estimates are produced annually by the Department of Finance for use by local areas to calculate their annual appropriations limit. The State Controller's Office uses Finance's estimates to update their population figures for distribution of state subventions to cities and counties, and to comply with various state codes. Additionally, estimates are used for research and planning purposes by federal, state, and local agencies, the academic community, and the private sector.

These estimates reflect a state and county level revision of the Preliminary January 1, 2020 estimates that were released in May 2020 and had the state population at 39,782,870 versus this year's revised estimate of 39,648,938; a downward revision of 133,932. The primary cause of this revision was International migration which was revised for the period of 2016-2020 to better reflect slowing international migration to the U.S. in recent years.

Changes to the housing stock are used in the preparation of the annual city population estimates. Estimated occupancy of housing units and the number of persons per household further determine population levels. Changes in city housing stock result from new construction, demolitions, housing unit conversions, and annexations. The sub-county population estimates are then adjusted to be consistent with independently produced county estimates.

Comparing Census Bureau's recently released July 1, 2020 estimates with Finance's January 1, 2021 estimates should generally be avoided since they refer to different points in time. In addition, there are numerous differences between the two series including the effects of the wildfires, changes in migration patterns, accelerating slowdown in births, and excess deaths due to the COVID-19 pandemic that make comparisons difficult.

All Finance population and housing estimates are benchmarked to a decennial census. The estimates in this report continue to be benchmarked to the 2010 decennial census as insufficient detailed data is currently available from the 2020 Census. The 2022 estimate series will introduce a new Finance benchmark based on Census 2020.

Related population reports are available on the Department's website:
